

Full Panel System

The SG 50 100 system offers the right size to handle full 4 x 8 sheets of material.

Manufactured at our facility, the SG is easily customized with different dispense heads, meter / mix systems etc.

The open frame overhead gantry structure combined with welded steel construction make it an ideal platform for conveyor pass thru applications as well.

Integrated Controls

The integrated controls require no PC for machine operation. However, a Windows Software Suite is available to import motion paths from CAD (DXF, PLT, G Code) type files direct. All Dispense Works control functions are available with the SG Series.
