

The Popular RP-1215 Robot

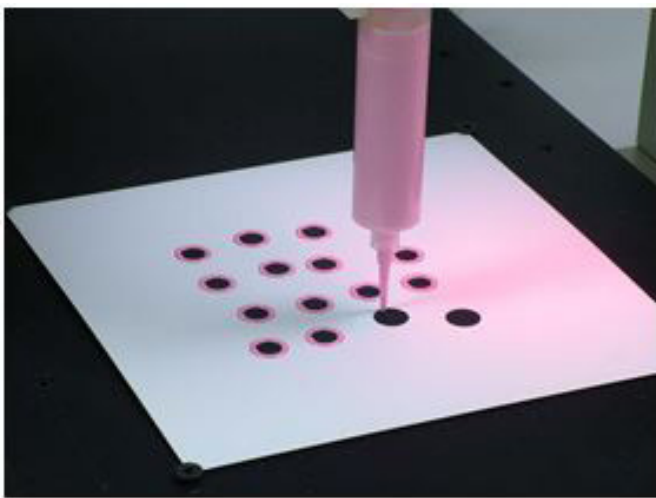

Applying Adhesive to Rings

Circular components unevenly spaced are registered individually using the optional DW vision system.

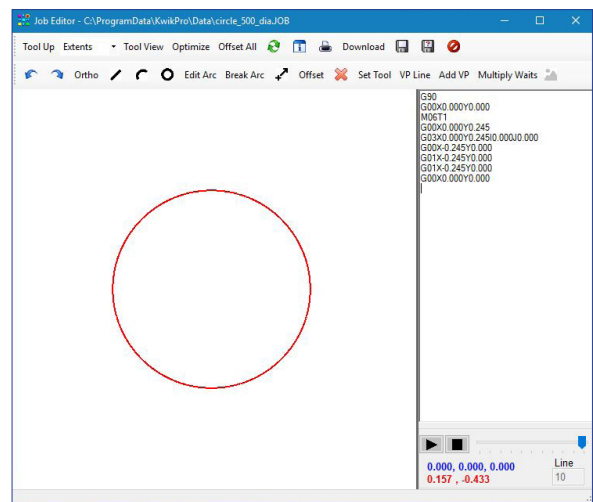

16 different patterns may be stored and automatically retrieved within the program.

The dispense path may be taught with the on-board jog & teach routine or directly imported from a DXF, PLT or G-Code file.

Both the Robot and Vision system are self contained. No PC is required for operation.

Close up of "uneven" array pattern.
Automatically centered with vision

Simple G Code program defining the path
