

2 Part Cartridge Dispensing System

2 part dispense heads are available for any cartridge sizes and geometries from 50ml to 600ml. This includes side by side or co-axial.

Many standards are available from stock for 1:1 thru 4:1 ratios.

All feature CNC machined accurate construction, quick cartridge load/unload mechanisms and our exclusive real time control system that provides the greatest repeatability for the most demanding applications

Actual dispense pattern reveals consistent bead width thru corners, arcs, diagonals, etc.

Our exclusive position and pressure control of the pistons results in accurate beads, dots and potting fills directly dispensing from the cartridge. A "parking" position may be set to auto purge into a cup if needed.
