

### Dual Material Applicators

Two precision spool valves on independently retracting slides are used to apply different materials to a family of products

A 20 ounce pressure pot and a 5 gallon (not shown) pail pump are used to deliver the materials to the robot.

The RP is the best choice for higher payload applications with machine tool like performance.

#### Simple Effective Fixturing

First things first. The large stable ground base plate provides a solid and accurate foundation for fixturing.

The custom fixture at right was developed to accommodate several types and sizes of housings with quick changeover features to streamline production.

Easily removable from the bed, this fixture has adjustable pins, rotating turret and origin pin for dispensing tip(s) registration.
