

BENCH TOP AUTOMATION

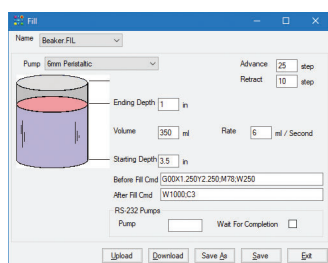

The Ring Dex filling & capping system, by Dispense Works, is ideal for processing small bottles, tubes & vials in a compact & affordable bench top package.

It features a true file based control system requiring no PC for operation. Setup of fill volumes, capping torques and check weights, etc is done with simple pre-programmed graphical interfaces screens.

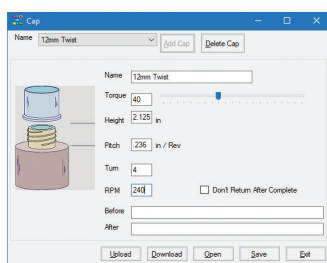

Just “fill in the blanks” and start building libraries of products. Great for future expansion.

FILLING - TIPPING - CAPPING - WEIGHING - ASSEMBLY - LABELING - INSPECTION

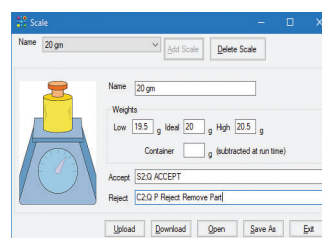

Production date (for each container) is time & date stamped with its recorded fill weight. This history file may be uploaded for documentation and reporting requirements. The system includes an on-board calibration routine.

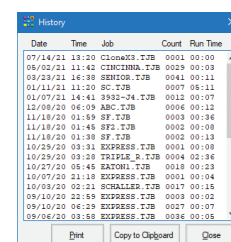

FILL FILES

CAPPING FILES

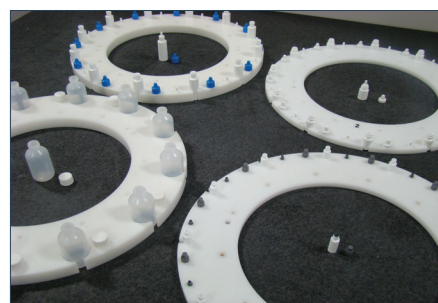

SCALE FILES

PRODUCTION DATA

The Ring Dex dials are removable for quick changeover requiring no previous technical experience. Great for processing families of small bottles or vials.

Changeover means just loading a new file.
